DETAILED ACTION

Specification

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1-15 are rejected under 35 U.S.C. 102(e) as being anticipated by US patent 6,429,444 (Korenev et al). In reference to claims 1-11, Korenev discloses an irradiation comprising a radiation source (10), a product location system (32), a sensor (40 a-c), and a control system (54). Korenev discloses the irradiation system wherein the radiation source provides a beam (22). Korenev discloses the irradiation system wherein the location system comprises a conveyor (32). Korenev discloses a system wherein the sensor system includes an array (40a-c). Korenev discloses the irradiation system wherein the sensor system further includes means for scaling the intensity of the beam that passes through the product (58). In reference to claims 12-15, Korenev discloses a method of irradiating a product comprising providing a radiation beam at a controlled intensity, directing the beam onto a product, measuring the intensity of the beam that passes through the product, adjusting the intensity. Korenev discloses a method wherein directing the radiation beam onto product comprises advancing product past the radiation beam on a conveyor (see abstract).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US patents; 5,966,457 (Lemelson), 6,232,610 (Pageau et al), and 5,661,305 (Lawrence et al). All the cited US patents contain art similar to
